Re: 3M Canada Certified Fabricator and 3M Certified Digital Fabricator for  
Regulated Traffic Signs – STATEMENT OF CERTIFICATION.

To whom it may concern:

The 3M Certified Fabricator for Regulated Traffic Signs program involves an onsite review of the Fabricator's manufacturing facility by a technical representative of 3M Transportation Safety Division - the manufacturer of the reflective sheeting and inks. This onsite review is to ensure that the Fabricator has the correct equipment, materials, and expertise at their disposal to process 3M™ Reflective Materials according to 3M recommendations to make regulated signs. The audit details are outlined in the comprehensive documents titled, "3M Canada Certified Fabricator for Regulated Traffic Signs Program" and "3M Canada Certified Digital Fabricator for Regulated Traffic Signs Program."

The Sherine shop was certified on November 15, 2020 and has maintained that status since 2003. The undersigned herewith certifies that Sherine meets or exceeds all requirements and is authorized to carry the 3M Certified Fabricator, and 3M Certified Digital Fabricator designations for a maximum of 18 months from the certification date, at which point recertification will be required.

Certification Checklist:

- Business requirements
- Facilities, raw materials storage, and operator training procedures
- Cut-and-applied production requirements
- Digital sign production requirements
- Digital sign performance verification
- Packaging, storing, shipping procedures
- Sign identification practice
